(54) Title: A FILTER BAG AND A FILTER DEVICE PROVIDED WITH SUCH FILTER BAG

(57) Abstract: A filter bag (1) for a filter device, which filter bag comprises a tubular, flexible, air-penetrable filter body (6) provided with a suspension arrangement at an unfolded end thereof. The suspension arrangement comprises a rigid ring element (7) annularly secured to the unfolded end of the filter body. The ring element (7) is arranged at least partially at an interior part of the filter body (6). Also a filter device comprising a housing with a dust chamber (4) and a clean-air chamber (5) that are separated by a partition wall (3) suspending at least one filter bag (1) as described above that extends through an opening (2) provided in the partition wall (3) with a main part of the filter body (6) located in the dust chamber (4). The ring element (7) of the filter bag (1) extends at least partially into the opening (2) in the partition wall (3).
